DETAILED ACTION

Applicant's amendment and terminal disclaimer of 15 July 2002 are entered. The application has been re-assigned to Examiner Willis.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 38-48, drawn to compositions comprising at least one amino sugar, classified in class 514, subclass 23.
- II. Claims 49-82, drawn to methods of performing peritoneal dialysis, treating a patient suffering from renal failure, and reducing at least one complication associated with peritoneal dialysis, classified in class 514, subclass 23.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case a composition comprising at least one amino sugar can be used in a materially different process. For example, Pecht et al (US Pat. 4,996,296) discloses a 5% solution of N-acetylglucosamine in buffer used to elute a column containing CBP samples (see col. 18, lines 45-50). The intended use and preamble of the composition claims is not given patentable weight.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

The claims are generic to a plurality of disclosed patentably distinct species comprising at least one amino sugar, at least one electrolyte, and at least one additional agent. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from each grouping, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined (Group I or II), and an election of at least one amino sugar, at least one electrolyte, and at least one additional agent and the claims readable thereon even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
